## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-66, drawn to a subject matter of encoding comprising the use of decoder pointers generated by the encoder classified in class 382, subclass 232.
  - II. Claims 67-78, drawn to a subject matter of decoder classified in class 382, subclass 233 and/or class 375 subclass 240.25.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as decoder. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Art Unit: 2624

2. The Invention I, Claims 1-66, contains claims directed to the following patentably distinct species of the claimed invention:

- Species 1 corresponding to claims 2-4;
- Species 2 corresponding to claims 5-6, 9, 23-25, 29, and 43-45;
- Species 3 corresponding to claims 7, 8, 26-28, and 46-47; and
- Species 4 corresponding to claims 11-21, 31-41, 49-58, 60-62, and 64-66

The species are independent or distinct because each of Species 1-4 has a different material design and mode of operation. For example, the utility of color decomposing in Species 2 is not used in any one of Species 1 and 3-4; the utility of decomposing stereo channels of Species 3 is not used in any one of Species 1-2 and 4; and the utility of a companion bitstream and reshaping the combined bitstream of Species 4 is not used in any one of Species 1-3.

If Invention I, claims 1-66 is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species as pointed out above for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 22, 42, and 59 are generic. Furthermore, claims 10, 30, 48, and 63 are not generic to Species 1-4 but will be examined together with the election of either Species 2 or 3.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an

Art Unit: 2624

allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
